Full-Stack Developer | TypeScript · React · Node.js · PostgreSQL · Docker

Professional Summary

Full-Stack Developer and Computer Engineer (CESUPA), delivering end-to-end web, mobile, and desktop applications — from database modeling to production deployment. Sole developer at Eletro Transol Tecnologia, where I built the company's digital ecosystem: the Eletro Transol Online B2B app, published on the App Store and Google Play; a production corporate omnichannel platform with 53 screens and 123 tables; and an employee reporting channel aligned with NR-01 — integrated with the ERP, SEFAZ, and AWS services. Core stack: TypeScript, React, React Native, Node.js, PostgreSQL, and Docker. 3rd place at Amazon Hacking 2025 as Lead Developer.

Professional Experience

Full-Stack Developer | Eletro Transol Tecnologia – Belém, PA — *Jun 2026 – Present*

- Sole developer at the company, responsible for the complete system lifecycle: requirements gathering with business teams, architecture, development, deployment, maintenance, and support.
- **Omnichannel:** built a corporate platform from scratch (Node.js/Fastify, React 19, PostgreSQL, Socket.io), in production since Sep/2026, combining real-time WhatsApp and email support, internal chat with WebRTC calls, and Sales, Finance, HR, and Logistics modules — 53 screens, 123 tables, ~61K lines of code, and ~155 automated tests.
- Integrated the platform with the WinSAC/ENSIS ERP (Firebird → PostgreSQL synchronization and order submission via REST API), SEFAZ using an A1 certificate with mutual TLS, Amazon SES/SNS for email campaigns, and Qive for receiving NF-e, CT-e, and NFS-e documents in accounts payable.
- Designed job queues without Redis (PostgreSQL with FOR UPDATE SKIP LOCKED), passwordless authentication with instant session revocation, hierarchical permissions in a multi-company environment, and deployment with Docker Compose, Caddy, and CI via GitHub Actions.
- **Eletro Transol Online:** completed and published the React Native + TypeScript B2B e-commerce app on the App Store and Google Play, developing the backend, ERP integration, authentication, payments, push notifications, and admin panel; orders placed in the app are processed directly in the ERP. I received the project from another vendor as a static frontend, completed the product, and negotiated its adoption — which led to my hiring.
- **Employee Reporting & Support Channel:** developed an employee reporting channel (Next.js, TypeScript, Prisma, PostgreSQL), supporting anonymous or identified submissions, non-sequential case IDs, an HR dashboard with severity levels, role-based access control, and the quarterly report required by NR-01.

Full-Stack Developer (Freelance) | River Logistics System – Belém, PA — *2025 – 2026*

- Web system for a cargo and passenger river transportation company (Belém–Macapá–Santarém routes), developed in partnership with another developer.
- Responsible for data modeling, backend (Node.js/PostgreSQL), and frontend (React/TypeScript), including trip, vessel, and billing management.

Infrastructure & Automation Analyst (N3) | Amazon Informática – Belém, PA — *Aug 2025 – Jan 2026*

- Developed Python scripts for automated report generation and GLPI data integration, reducing manual processing time by ~35%.
- Built RPA solutions with Python and AutoIt to optimize internal processes and reduce operational errors.
- Administered Microsoft 365 environments (Intune, endpoint management) and supported infrastructure performance and security improvements.

IT Support Intern | Regional Labor Court of the 8th Region – Belém, PA — *Jul 2023 – Jul 2025*

- Provided remote and on-site technical support to approximately 500 users (internal systems, hardware, and software), including documentation and ticket management.

Featured Projects

TEP – Pará Business Tokenization | 3rd place at Amazon Hacking 2025 — *2025*

- Blockchain platform for tokenizing Amazon bioeconomy products to promote financial inclusion for micro and small businesses, in a competition supported by Vale, Accenture, and Wipro. Served as Lead Developer (architecture and full-stack development). github.com/yanmathzz/tep-token-vista

Inkpad – Markdown Notes Editor | Tauri v2, Rust, JavaScript — *Open Source (MIT)*

- Desktop editor for Windows with real-time preview, instant search, and auto-save. Chose Tauri over Electron to produce an executable under 10 MB using the native WebView2 runtime. github.com/yanmathzz/inkpad

FinTrack – Personal Finance Management | TypeScript, React, Node.js, PostgreSQL, Docker — *Open Source (MIT)*

- Full-stack personal finance application with authentication, an interactive dashboard, and data visualization, fully containerized. github.com/yanmathzz/FinTrack

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, Rust

Frontend: React, Next.js, Vite, Tailwind CSS, Framer Motion, HTML/CSS

Mobile & Desktop: React Native, Electron, Tauri

Backend: Node.js, Fastify, REST APIs, WebSockets (Socket.io), Zod, Prisma

Databases: PostgreSQL, Firebird (ERP integration), SQLite

DevOps: Docker, Docker Compose, GitHub Actions (CI), Caddy, Nginx, PM2, Linux/VPS

Integrations: SEFAZ (A1 certificate), NF-e, CT-e, MDF-e, ERP WinSAC/ENSIS, WhatsApp Cloud API, Amazon SES/SNS, WebRTC

Automation & Tools: Git, GitHub, RPA (Python/AutoIt), web scraping, GitHub Copilot

Infrastructure: Microsoft 365, Intune, Windows/Linux, GLPI

Education

Bachelor of Computer Engineering | CESUPA – Centro Universitário do Estado do Pará — *Dec 2024*

- Undergraduate Thesis: Systematic review of best practices for optimizing steel production using digital twins.

Certifications

- MD-102: Microsoft 365 Endpoint Administrator – Microsoft (2025)
- Data Analysis and Visualization with Python · SQL Foundations · Excel and Copilot Fundamentals – Microsoft (2026)
- CompTIA A+ Core 1 and Core 2 (complete preparation courses) – Udemy (2025)

Languages

Portuguese: Native • English: Intermediate • French: Basic (currently studying, TCF/TEF goal)
